\* All equivalence scores are based on [concordance tables published by the ACT and College Board](#). Published concordance tables include prediction error between tests (i.e. ACT vs. SAT) as well as within a test (sub-scores to overall score). As such, sub-scores do not always add up to composite scores. Users should rely on the Mindprint test recommendation ranges which are designed to account for the standard error intervals in the correlations provided by the test publishers.
